## PLANTS AUDITS, DEBOTTLENECKING AND EFFICIENCY IMPROVEMENT

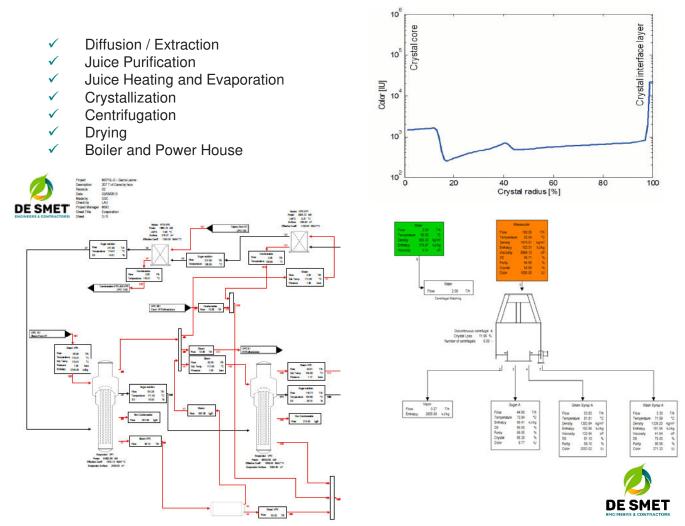

## thanks to DSEC's Factory Audits and INTEGRATED PREDICTIVE MODEL (DSEC IPM<sup>®</sup>)

Understanding why a plant is not performing as expected or improving performances of an existing unit can only be done efficiently by analysing how the plant should be performing in its current configuration and how it would perform if modifications are provided.

To do so, DSEC has developed a fully Integrated **Predictive Simulation tool** (**DSEC IPM**<sup>®</sup>) running on MATLAB <sup>®</sup> and SIMULINK <sup>®</sup> software allowing to simultaneously consolidate the Mass and Heat Balances as well as to predict the colour transfer throughout the growth of the sugar crystal layers. The **DSEC IPM**<sup>®</sup> can reproduce the plant set-up and simulate the consequences of any planned modification with a view of improving plant performances further to an in-depth site audit:

- Capacity Increase
- Yield improvement
- Energy consumption improvement
- Color optimization

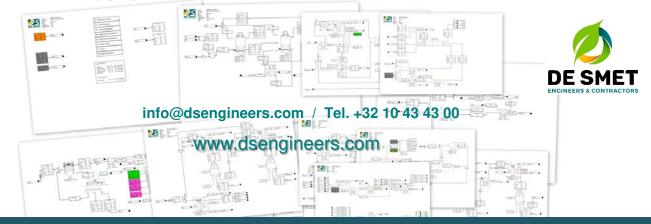

It is based on **Physical Parameters and Mathematic Models** (no preset values or ratios) and provides data that can be used for the plant operation, **covering the full process**:

## DSEC's Recent Plants Audits with Elaboration of Integrated Predictive Model (Sugar Plants and Refineries)

PRODUCT	CUSTOMER	COUNTRY	OBJECT	YEAR
CHICORY	BENEO	Belgium/Chile	Energy savings	2018
BEET	British Sugar	UK	Energy savings	2017-2019
BEET	Saint Louis Sucre	France	3rd strike improvement	2017
CANE	Eastern Sugar	Thailand	1° Refinery / 2° Crystallization improvement 3° Energy savings	2017->2020
BEET	Tereos - Connantre	France	Full Sizing of Crystallization Plant	2016
BEET	Raffinerie Tirlemontoise (Südzucker Group) – Wanze, Longchamps & Tienen	Belgium	Evaporation Audit Beet front end plant	2016 2017/19
CANE	Dangote Sugar Refinery	Nigeria	Full Sugar Refinery Audit (Phases 1 & 2)	2014-2015
CANE	Omnicane - Savannah	Mauritius	Full Sugar Plant Audit	2015
CANE	Undisclosed	Undisclosed	Reorganization of Crystallization Plant	2015
BEET	Pfeifer & Langen Group	Germany	Energy Efficiency Improvement	2015/17/18/20
BEET	Tereos - Ludus	Romania	Analysis of Pulp Dehydration Plant	2015
BEET	Tereos - Chevrières	France	Full Sizing of Crystallization Plant	2015
CANE	Açúcar Guarani – Cruz Alta (Tereos Group)	Brazil	Energy Efficiency Improvement Analysis	2015
CANE	SOMDIAA	Chad	Evaporation and Crystallization Plants Audit	2015
BEET	Tereos - Ludus	Romania	Reorganization of Crystallization Plant	2014
BEET	Empresa IANSA	Chile	Evaporation Plant Analysis	2014
BEET	Raffinerie Tirlemontoise (Südzucker Group) - Wanze	Belgium	Crystallization Plant Improvement Analysis	2014
CANE	SOMDIAA	Gabon	Sugar Plant capacity increase analysis	2013
CANE	Tereos – Bois Rouge	Reunion	Reorganization of Crystallization Plant	2012

In addition DSEC's Integrated Predictive Model is systematically used for the development of all DSEC's turnkey projects around the world (EPC / EPCM).

RELIABILITY THROUGH EXPERIENCE
